Description

Software Engineering student at FIAP and Computer Technician from UNASP, with experience in Full Stack application development, Python automation, and hardware-software integration using ESP32. My Final Course Project was recognized as the 3rd best among more than 25 teams. I am seeking an internship opportunity to develop innovative solutions, expand my knowledge, and contribute to impactful projects.

Objective

I am seeking an internship opportunity in Software Development, Software Engineering, or Technology, where I can apply my knowledge in Full Stack development, contribute to innovative projects, and continue improving my technical and professional skills.

Technical Skills

Programming Languages

• Python • JavaScript • TypeScript • C++ • SQL

Development

• HTML5 • CSS3 • React

Tools

• Git • GitHub • MySQL • Figma • Notion • Trello

Knowledge
REST APIs
Full Stack Development
Hardware × Software Integration
UI/UX
Artificial Intelligence

Academic Background

FIAP - Paulista | Software Engineering | Status: Currently studying 2nd semester
02/2026 - Present

UNASP - SP | Computer Technician integrated with High School | Status: Completed
02/2023 - 12/2025

Complementary Courses

Fundação Bradesco | IT Fundamentals - Hardware and Software
01/2026 - 03/2026

Nano Course - FIAP | Design Thinking Process
03/2026 - 03/2026

Nano Course - FIAP | Python Development
04/2026 - 04/2026

Nano Course - FIAP | Cybersecurity
05/2026 - 07/2026

Nano Course - FIAP | Artificial Intelligence and Computational Intelligence
07/2026 - 07/2026

Language

Projects

SmartCoinc — Final Course Project (3rd place in the class)

Project of a smart piggy bank for children's financial education, developed to encourage financial habits from childhood through gamification.

Main responsibilities:

- Development of the Web application using React;
- Hardware and software integration using ESP32;
- Communication between devices through APIs;
- Programming in C language for hardware control;
- Development of the interface for parents' monitoring;
- Integration of LCD Display, OLED Display, and speaker for user interaction.

Technologies used: React • ESP32 • C++ • APIs • HTML • CSS • JavaScript

Password Strength Analyzer

Web application developed in TypeScript for real-time password strength analysis, providing instant feedback based on security criteria and best practices for creating stronger credentials.

Main features:

- Real-time password strength evaluation;
- Minimum length validation;
- Uppercase and lowercase letter verification;
- Numbers and special character identification;
- Password classification (Weak, Medium, and Strong);
- Responsive and intuitive interface.

Technologies used: TypeScript • JavaScript • CSS3 • Git • GitHub
